Professional Summary

Product focused Software Engineer with experience leading development across web and mobile platforms, building scalable systems, and driving cross functional initiatives from concept to production. Proven track record of improving engineering efficiency, shipping high impact features, and aligning technical execution with business goals. Entrepreneurial background with a strong foundation in product thinking, user experience, and business strategy.

Professional Experience

Audicus – Software Engineer (Web & Mobile)
Sept 2025 – Present

- Led architecture and development of core frontend systems across React web and React Native mobile applications supporting production hearing test products.
- Designed and implemented a modular analytics and telemetry service, enabling dynamic provider integration (GTM, Clarity, Hotjar, Sentry) and improving observability and system reliability.
- Owned and delivered a UAT → Production deployment pipeline across CMS and mobile apps, eliminating manual processes and significantly improving release velocity and safety.
- Automated CMS workflows by building tooling to synchronize Directus environments (local, UAT, production), reducing redundant engineering effort and preventing data inconsistencies.
- Spearheaded development of a cross-platform Hearing Test SDK, centralizing business logic, authentication, and data mapping into a scalable shared package.
- Implemented secure data handling practices, including encryption and controlled data flow for patient and session data.
- Expanded automated test coverage by building end-to-end testing frameworks for critical user flows, improving confidence in production releases.
- Drove platform scalability initiatives by migrating hardcoded product configurations into a CMS driven architecture, enabling non engineering stakeholders to manage content dynamically.
- Delivered complex, user facing features including hearing tests, headphone validation, and audio system improvements across web and mobile.

- Mentored junior engineers through recurring 1:1s, code reviews, and pair programming, elevating team code quality and engineering standards.
- Partnered with product, design, and CX to shape feature requirements and support major product launches.
- Introduced engineering best practices including branch protection rules, release cadence planning, and onboarding documentation.

LainaHealth (IncludeHealth) – Front-End Engineer (Contract)
Jan 2025 – Sep 2025

- Collaborated cross functionally to improve user experience and frontend performance for a telehealth platform.
- Led engineering coordination efforts, aligning development work with product goals and business priorities.
- Facilitated team workflows through standups and contributed to onboarding processes for new engineers.
- Acted as a bridge between technical and nontechnical stakeholders, ensuring clarity in requirements and delivery.

Vemara Solutions – Founder & CEO
Aug 2024 – Jan 2025

- Founded and operated a boutique development consultancy delivering custom web and mobile applications for small businesses.
- Led end to end project execution, from client acquisition and scoping to delivery and post launch support.
- Developed proposals, defined technical architecture, and ensured successful on time delivery across projects.
- Built and managed client relationships, translating business needs into scalable technical solutions.
- Mentored team members and established processes for efficient development and communication.

Fiserv – Mobile Engineer
May 2022 – Aug 2024

- Developed mobile banking applications used by millions, contributing to high availability, secure financial systems.
- Led initiatives to improve code modularity and maintainability, reducing onboarding time for new engineers.

- Collaborated with design, QA, and security teams to deliver features aligned with strict compliance and performance standards.
- Contributed to internal best practices and supported junior developers through mentorship and guidance.

Selected Projects & Ventures

ClipAI – Founder & Lead Engineer
AI-Powered Video Editing Platform
app.useclip.ai | App Store

- Built and launched an AI-powered platform that transforms long form content into short form video clips.
- Designed backend workflows for transcription, clip generation, and automated editing using AI models.
- Achieved 90%+ clip relevance while reducing infrastructure costs by over 90% through optimization.
- Led product strategy, user onboarding, pricing, and go-to-market execution.

MacroTrack – Founder & iOS Developer
Nutrition Tracking App with Real-Time Sharing
App Store

- Developed a social nutrition tracking app with real-time sharing and in-app engagement features.
- Implemented growth strategies including influencer marketing and App Store optimization.
- Integrated subscription monetization using RevenueCat and iterated based on user behavior data.

Pinned – Founder & Lead Engineer
Social Note-Sharing App
App Store

- Built and launched a social messaging platform enabling users to send real-time notes displayed directly on iOS home screen widgets.
- Architected a full-stack system using React Native, FastAPI, and Firebase, supporting real-time delivery and scalable user interactions.
- Implemented widget-based experiences using SwiftUI, bridging native and cross-platform layers for seamless UX.

- Integrated AI-powered features using GPT-4 to enhance messaging and personalization.
- Designed and implemented subscription-based monetization (Pro tier), including feature gating and purchase flows.
- Owned end-to-end product development, including UX design, backend architecture, and App Store launch.

Intervu – Founder & Lead Engineer
AI-Powered Interview Preparation App
App Store

- Developed an AI-driven interview coaching platform delivering personalized mock interviews based on user resumes and job descriptions.
- Built backend systems for prompt orchestration, session management, and structured feedback generation using GPT-4.
- Designed real-time conversational interview flows and feedback loops to simulate realistic interview scenarios.
- Implemented persistent interview history and performance tracking to improve user outcomes over time.
- Led product strategy, feature development, and iteration based on user feedback and engagement metrics.

CaptureNoire – Founding Engineer
Mobile Photo & Video Editing App
App Store

- Served as founding engineer, contributing to the development of a cross-platform mobile photo and video editing application.
- Built core features using React Native and Swift, integrating native modules for advanced image processing and performance optimization.
- Collaborated on architecture decisions to support scalable media processing and high-performance rendering on mobile devices.
- Partnered closely with product and design to deliver a polished user experience across iOS devices.

Skills

Engineering & Product

- React, React Native, TypeScript

- Frontend Architecture & System Design
- API Integration & Data Modeling
- Mobile & Web Application Development
- Testing (E2E, Integration)
- Performance Optimization

Business & Leadership

- Cross-Functional Collaboration
- Product Strategy & Execution
- Client & Stakeholder Communication
- Agile / Scrum Methodologies
- Mentorship & Team Development

Education

Rutgers University
Bachelor of Arts in Business Administration (In Progress) – Expected May 2026

DeVry University
Associate of Applied Science in Computer Science – October 2020
